B2B API Document

Pathology Bookings API

Core API

GET getAccessToken API 🔒

https://t25crm.healthians.co.in/api/<partner_name>/getAccessToken

This API would be used to authenticate all sessions initiated towards Healthians with Partner.

Basic Authentication will be applied in this API.
We will be providing you an api_key and api_secret_key for fetching the Access Token

The TTL of the Access Token will be of 1hour.

POST checkServiceabilityByLocation_v2 🔒

https://t25crm.healthians.co.in/api/<partner_name>/checkServiceabilityByLocation_v2

Check Serviceability By Location v2

Overview

This API endpoint allows you to check the serviceability of a location. By providing precise location details, the system determines whether services are available in the specified area.

Request Body:

- `lat` (string, required): Latitude of the location.
- `long` (string, required): Longitude of the location.
- zipcode (string): zipcode of the provided location.

Response:

The response for this request can be represented as a JSON schema:

```json
{
    "status": true,
    "message": "This Lat Long is serviceable.",
    "data": {
        "zone_id": "86"
    },
    "resCode": "RES0001",
    "code": 200
}
```

AUTHORIZATION Bearer Token

Body raw (json)

```json
{
    "lat": "18.96569570177629",
    "long": "72.80431170101929",
    "zipcode" : "122016"
}
```

POST getSlotsByLocation

https://t25crm.healthians.co.in/api/<partner_name>/getSlotsByLocation

Overview

This API endpoint allows partners to retrieve available slots by location (`lat` , `long`), date in `YYYY-MM-DD` format, and `zone_id` (retrieved from `checkServiceabilityByLocation_v2` API). The available slots will be for **today + 7 days**.

Slots will **not** be available for dates **before today** or **after today + 7 days**.

Request Body

- `slot_date` (string): The date for which slots are to be retrieved.
- `zone_id` (string): The ID of the zone for which slots are to be retrieved. You will get zone_id from checkServiceabilityByLocation_v2 API's response.
- `lat` (string): The latitude of the location for which slots are to be retrieved.
- `long` (string): The longitude of the location for which slots are to be retrieved.

Response

The response is in JSON format and has the following schema:

```json
{
    "status": true,
    "message": "success!",
    "data": [
        {
            "booked_count_slot_count": "0",
            "end_time": "10:00:00",
            "free_count_slot_count": "0",
            "is_peak_hours": "0",
            "sample_type_id": "1",
            "slot_date": "2024-05-08",
```

- `status` (boolean): Indicates the success or failure of the request.
- `message` (string): Additional information or error message.
- `data` (array): Contains the slot information with various attributes such as booked count, end time, free count, peak hours, sample type ID, slot date, slot time, STM ID, total count, state ID, state, city ID, and city.
- `resCode` (string): Response code.
- `code` (number): Numeric code for the response.

    "zone_id":"53",
    "lat": "28.4595",
    "long": "77.0266",
    "zipcode" : "122016"

}
```

POST   freezeSlot_v1   🔒

https://t25crm.healthians.co.in/api/<partner_name>/freezeSlot_v1

This API is used to freeze the slot for a booking.

This API is used to temporarily reserve a booking slot for **15 minutes** to ensure availability during the booking process. If the booking is not completed within this time, the slot may be assigned to another vendor, leading to a booking failure.

The `slot_id` returned in the response **might differ** from the initially requested one, but the **date and time of the slot will remain unchanged**. This `slot_id` must be used in subsequent API calls like `createBooking_v3` or `setSlotForBooking` to confirm the booking.

ATTRIBUTE	CHILD ATTRIBUTE	DESCRIPTION	DATA TYPE
slot_id		Slot id is used to get sample collection date and time which are taken from **checkServiceabilityByLocation_v2** api.	Integer
vendor_billing_user_id		Billing user id at vendor's end.	String

POST   B2B Get Partner Products 🔒

https://t25crm.healthians.co.in/api/<partner_name>/getPartnerPro ducts

The API **fetches all products** that are available in a given ZIP code.

The type of product being requested in key "product_type". It can be:
- `package` (a group of tests bundled together)
- `profile` (a set of tests for a specific condition)
- `parameter` (a single test)
- **Blank (`""`)** (returns all available tests in the ZIP code)

The type of test being requested in key "test_type". It can be:
- `pathology` (laboratory tests for blood, urine, etc.)
- `radiology` (imaging tests like X-ray, MRI, etc.)

The response includes **pricing details**, which represent the **agreed price** between **Healthians and the partner**.

ATTRIBUTE	DESCRIPTION	DATA TYPE	MANDATORY
zipcode	6-digit valid pincode.	Integer	YES - if city_id is not provided.
product_type	Product type for which details are needed.	String	NO
product_type_id	Product type id for which details are needed.	String	NO
start	Number From where you want to start	String	NO
limit	Limit of data	String	NO

test_type can be pathology or radiology.

To get city_id refer to getActiveZipcodes *API*

AUTHORIZATION Bearer Token

Body raw (json)

```json
{
    "zipcode":"122006",
    "product_type":"profile",
    "product_type_id":"",
    "start":"0",
    "limit":"40",
    "test_type":"pathology"
}
```

POST createBooking V3 API (🔥 Newly Launched)

https://t25crm.healthians.co.in/api/<partner_name>/createBooking_v3

ATTRIBUTE	CHILD ATTRIBUTE	DESCRIPTION	DATA TYPE
customer		Customer key is to get the details of the customer including child keys mentioned below.	Collection
	customer_id	Used to uniquely identify each customers.	String
	customer_name	Name of the of the customer for whom the test is booked.	String

`customer_calling_number` and `mobile` **has to be same**, communication will be done on provided number.

Booking flow has the capability to handle **multiple customers with multiple packages** in the same booking.

Payment_option can be "prepaid" or "cod".

zone_id to be retrived from checkServiceabilityByLocation_v2 API

Partner needs to send their **unique cust ids** for each customer.

Partner need to **send encrypted** values in **checksum for booking creation**.

For partial Payment:

- In partial payment some amount will be paid by partner and remaining amount will be collected by healthians during sample collection from customer.
- "partial_paid_amount" key will be used and value should be more than 0 and "payment_option" should be "prepaid".

Error Messages and Resolution:

Error msg-1:

Prices for mentioned test are not approved/uploaded. Healthians Low Energy Checkup (package_91) , "

Resolution:

This error comes, when any tests "package_xxxx", "profile_xxxx" or "parameter_xxxx" prices is not availble in requested city, you need to reachout to business team to get price updated.

Error msg-2:

"checkSum Mismatch"

Resolution:

Need to **send encrypted** values in **checksum for booking creation.**

URL for ref for generating encrypted values in checksum in different languages: https://partners.healthians.com/#/sample_checksum_code/sha256

Error msg-3:

"Basic Female Package can't be booked for male customer."

Resolution:

Some tests are gender specific, so need to book those which are valid of gender requested.

Error msg-4:

"Advance Child Care (test) cannot be booked in Gurgaon as Lab is not tagged. Please reach out to Healthians team."

Resolution:

This needs to be esclated to business team.

Error msg-5:

"This slot has been allocated to another booking, please try selecting another slot."

Resolution:

As message defined that slot has already been consumed, so need to get new availabe slot from **getSlotsByLocation** API.

Error msg-6:

"This phone number attached with different customer"

Resolution:

This error message says that the user once registered with combination of Mobile and vendor_billing_user_id is not exactly same. **The**

vendor_billing_user_id and customer_id can be retrived from **getVendorIdDetailsEnd** API.

POST getCustomerReport_v2 API

https://t25crm.healthians.co.in/api/<partner_name>/getCustomerReport_v2

API response return only full/partial latest varified report.

Partial Reports Allowed
If **allow_partial_report** value ,If this flag is **set to 1**, the system will **send partial reports** whenever they are available.

The user will receive **multiple reports** over time **until** the full report is ready.

Example:

- A blood test consists of **5 parameters**.
- **3 parameters are ready today**, so a **partial report** is sent.
- The remaining **2 parameters are ready tomorrow**, and then the **full report** is sent.

Full Reports Allowed

If this flag is **set to 0**, the system will **not send partial reports**.

The user will receive **only one response**, which is the **full report**.

Key Differences Between `1` **and** `0`

`allow_partial_report = 1`	`allow_partial_report = 0`
Sends **partial reports** before the full report.	Sends **only the final report** when all results are ready.
User gets multiple reports over time.	User gets only one report.
Useful when some test results are available early.	Useful when users only need the complete report.

If allow_partial_report is 0, we will only give reposne untill full report is availabe.

ATTRIBUTE	DESCRIPTION	DATA TYPE	MANDATORY
booking_id	Booking ID (Healthians Booking/Order Id) to get report.	Integer	YES
vendor_billing_user_id	Billing user id at vendor's end .	String	YES
vendor_customer_id	Vendor customer ID is customer ID at vendor's end.	String	YES
allow_partial _report	Send this Flag to 1 to fetch report even if its partially available	Integer	YES

allow_partial_report =1 then the API return the full/partial any report that is latest and verified

allow_partial_report=0 then the API only rerturn the full latest varified report

POST addOnBooking_v1 API 🔒

https://t25crm.healthians.co.in/api/<partner_name>/addOnBooking_v1

This API can be used for doing an add-on on an existing booking.

- We can add tests on an existing customer(need to use customer_id used in createBooking_v3 API) or we can add new customer with required tests.
- The vendor_billing_user_id has to be same as used in createBooking_v3 API.
- If both the `customer` and `package` arrays have the **same number of elements**, we can **map** each `customer` with the corresponding `package` based on their index position.
- addon_discounted_price : If any add-on is booked on mrp 2000 and discount is 500 then the addon_discounted_price will be "1500".
- addon_order_type = It describe the addon order type. The value can either be "prepaid" or "cod".
- Partner need to send encrypted values in checksum for booking addon.

ATTRIBUTE	CHILD ATTRIBUTE	DESCRIPTION	DATA TYPE

POST cancelBooking API

https://t25crm.healthians.co.in/api/<partner_name>/cancelBookin
g

This API enables **partners** to cancel a booking by providing a **valid booking ID**. However, cancellation is only allowed under specific conditions:

Valid Booking Status

- The booking must be in one of the following statuses before it can be canceled:
    - **Order Booked (BS002)** – The booking has only been placed.
    - **Sample Collector Assigned (BS005)** – A sample collector has been assigned, but the collection is yet to be completed.

Handling Bookings with Multiple Customers

- If a **single booking** contains **multiple customers**, then:
    - API allows partners to cancel **only a specific customer** from the booking while keeping other customers active.

Partial vs Complete Cancellation

- **Partial Cancellation**: If only **one** or **a few customers** from a booking need to be canceled, API requests should be made for only those customers.
- **Complete Cancellation**: If **all customers** in the booking need to be canceled, the partner must send **multiple API requests**, one for each customer, to fully cancel the booking.

POST   rescheduleBookingByCustomer_v1 API

https://t25crm.healthians.co.in/api/<partner_name>/rescheduleBookingByCustomer_v1

The **Reschedule Booking API** allows partners to update the scheduled date and time of a booking for a **future date**. This ensures flexibility for customers who need to modify their appointment.

Required Parameters for Rescheduling

To successfully reschedule a booking, the following details must be provided in the API request:

- `booking_id` → The unique identifier of the existing booking.
- `slot_id` → The new time slot in which the booking should be rescheduled, this will be retrieved from **getSlotsByLocation** API.
- `customer_id` → All customer ids exist in a booking.
- `reschedule_reason` → The reason for modifying the booking schedule.

Partial reschedules (for only a subset of customers) are not allowed.

The **response includes a new booking ID**, which will be considered for sample collection.

- **Partner need to send encrypted values in checksum for booking addon.**

POST   getBookingCustomerDigitalValue API   🔒

https://t25crm.healthians.co.in/api/<partner_name>/getBookingCustomerDigitalValue

This API allows partners to **fetch real-time digital test data** for each parameter within a booking. The data is provided on **customer basis**, enabling to track test results even before the final report PDF is generated.

Use Cases:

✅ **Real-Time Test Tracking**

- Customers and partners can **track the progress** of test results without waiting for the final report.

✅ **Enhanced User Experience**

- Partners can use this API to build **an engaging dashboard** that dynamically updates as test results become available.

✅ **Early Insights for Customers**

- Customers can **view individual test results** as they are updated instead of waiting for the complete report.

ATTRIBUTE	DESCRIPTION	DATA TYPE	MANDATORY
booking_id	Healthinas Booking/Order ID to get customer digital value.	Integer	YES
vendor_billing_user_id	Billing user id at vendor's end .	String	YES
vendor_customer_id	Customer id at vendor's end .	String	YES

POST   getBookingStatus API

https://t25crm.healthians.co.in/api/<partner_name>/getBookingStatus

This API enables partners to **retrieve the current order stage** for a customer's booking. It provides real-time updates on the **overall booking status, customer status, and test status**, helping partners track and manage bookings efficiently.

In ref booking id, we can get the new booking id geneated againt the requested booking id.

Use Cases:

✅ **Real-time Tracking of Orders**

- Partners can use this API to **fetch live updates** on bookings and customer test progress.

✅ **Automated Customer Notifications**

- This data can be used to **send SMS/Email alerts** about booking and test progress.

✅ **Better User Experience**

- The API response can be used to **display order tracking details** in the partner's application.

POST   setSlotForBooking API

https://t25crm.healthians.co.in/api/<partner_name>/setSlotForBoo
king

This API is designed to **assign a new slot for bookings that have been rejected from the lab's end** due to specific issues such as **insufficient sample quantity, improper temperature maintenance, or other lab-related rejections**.

When a booking is rejected by the lab, partners can use this API to reassign a **new slot** for sample collection, ensuring that the bookings sample can be recollected.

How to Retrieve the New Booking ID?

To reassign a slot, partners first need to fetch the **new booking reference ID** from one of the following sources:

1. `getBookingStatus` **API** → The rejected booking will contain a **new reference booking ID** (`ref_booking_id`) the status should be **BS0018**.
2. **Webhook Notification** → When a booking is rejected, a webhook event is triggered, and the response will contain the new **reference booking ID with status BS018**.

ATTRIBUTE	DESCRIPTION	DATA TYPE	MANDATORY
booking_id	Booking ID to set slot	Integer	YES
slot_id	Slot ID needs to be set. slot_id can be fetched from getSlotsByZipCode_v1 API	Integer	YES

POST   getPhleboMaskNumber

https://t25crm.healthians.co.in/api/<partner_name>/getPhleboMas
kNumber

This API is designed to **retrieve the masked contact number and name of the phlebotomist (phlebo) assigned to a booking**. The purpose of this API is to allow secure and controlled communication between the customer and the assigned phlebo **without revealing the phlebo's actual phone number**.

- 🔹 The **masked number will be available only if:**
✅ A **phlebo is assigned** to the booking.
✅ The **sample has not been collected yet**.
✅ The **customer is using the same phone number** that was used during booking (`customer_calling_number, mobile` in `createBooking_v3 API`).

ATTRIBUTE	DESCRIPTION	DATA TYPE	MANDATORY
booking_id	Booking ID to get phlebo mask number (This will be the masked number when customer will call to that number, it will connect with Healthians Phlebotomist).	Integer	YES

HEADERS

}
```

POST getPartnerTaggedPrices 🔒

https://t25crm.healthians.co.in/api/<partner_name>/getPartnerTaggedPrices

- The API is designed to enable users to receive a link via email. This link grants access to download a CSV file.
- The CSV file contains information about tests and their corresponding prices. These tests and prices are specifically those that are active in cities agreed upon between Healthians and the partner.
- The delivery method for accessing the CSV file is via email. Users would receive an email containing a link. Clicking on this link would lead them to download the CSV file.

User Registration

POST **New Request** 🔒

https://t25crm.healthians.co.in/api/<partner_name>/userRegistration

User Registration

This endpoint allows partners to register users for quick bookings on camp

Request Body

- `mobile_number` (string, required): The user's mobile number.
- `name` (string, required): The user's name.
- `age` (string, required): The user's age.
- `gender` (string, required): The user's gender.
- `email` (string, required): The user's email address.
- `vendor_customer_id` (string, required): The vendor's customer ID.
- `dob` (string, required): The user's date of birth.

Response

The response will be a JSON object with the following properties:

- `status` (boolean): Indicates the status of the registration.
- `message` (string): Additional information or error message.
- `code` (integer): The status code of the response.

Example

```json
{
    "status": true,
    "message": "",
    "code": 0
}
```
